Scientific and Strategic Communication for Public Health

Jay M. Bernhardt, PhD, MPH

Founding Director, Center for Health Communication
Everett D. Collier Centennial Chair in Communication
Professor, Departments of Communication Studies and Advertising and Public Relations

Greetings from the University of Texas Center for Health Communication

Center Kickoff Meeting – September 3, 2014

Communication for Healthier People in a Connected World

Improve the health of people in Texas, the US, and globally through leadership and excellence in health communication research, teaching, programs, and partnerships.
Poor Communication is a Major Part of the Problem
Effective Health Communication is Major Part of the Solution

What is Health Communication?

“The study and use of communication strategies to inform and influence individual decisions that enhance health.”
-US CDC & NCI

“The art and technique of informing, influencing, and motivating individual, institutional, and public audiences about important health issues.” -US DHHS
What is Health Communication?

“Health Communication is a multidisciplinary field of study and practice that integrates science, theory, strategy, and creativity to enhance health through messages and data that inform knowledge, attitudes, and behaviors at all ecological levels of influence.”

-Bernhardt, in development

Variations on “Communication” appear 188 times!
US Health Communication Priorities

Health Communication and Health Information Technology Section

- **HC/HIT-1**: Improve the health literacy of the population
- **HC/HIT-2**: Increase the proportion of persons who report that their health care providers have satisfactory communication skills
- **HC/HIT-5**: Increase the proportion of persons who use electronic personal health management tools
- **HC/HIT-9**: Increase the proportion of online health information seekers who report easily accessing health information
- **HC/HIT-12**: Increase the proportion of crisis and emergency risk messages intended to protect the public’s health that demonstrate the use of best practices

Deeper Dive #1

HEALTH COMMUNICATION MEDIA CAMPAIGNS
Media Campaigns: What Do We Know?

• Meta-analysis of 60 health comm. studies (n≈22,500)
  – Examined 22 tactics (e.g., fear, framing) and 6 individual characteristics (e.g., age, involvement) on health intentions
  – Examined when tactics and characteristics interact

• Finding: Message tactics have significant influence on intentions when controlling for individual differences
  – Strong effects of case information, social consequences, other referencing, female communicators, detection behaviors
  – Untailored framing and emotional appeals are "not advisable"

Designing Effective Health Communications: A Meta-Analysis (Keller & Lehmann, 2008)

Media Campaigns: What Do We Know?

• A systematic review was conducted to evaluate the effectiveness of health communication campaigns that use multiple channels, including mass media, and distribute health-related products
  – 22 that met Community Guide quality criteria were analyzed in 2010
  – Most studies showed favorable behavior change effects on health-related product use (a median increase of 8.4 percentage points)
  – By product category, median increases in desired behaviors ranged from 4.0% (condoms) to 10.0% (smoking cessation)

• Health communication campaigns that combine mass media with distribution of free or reduced-price health-related products are effective in improving healthy behaviors

Moody College of Communication Center for Health Communication
What is Social Marketing?

• Social Marketing seeks to develop and integrate marketing concepts with other approaches to influence behaviors that benefit individuals and communities for the greater social good.

• Social Marketing seeks to integrate research, best practice, theory, audience and partnership insight, to inform the delivery of competition sensitive and segmented social change programs that are effective, efficient, equitable and sustainable.

• 4 P's: Product, Price, Place, Promotion

International Social Marketing Association, European Social Marketing Association, and the Australian Association of Social Marketing

Media Campaigns: What Can Health Comm Do?

1. Define the campaign goal effectively:
   - Identify the goal and objectives
   - Determine role of communication

2. Define the intended audiences:
   - Identify the target audience and subgroups and segments
   - Learn as much about them as possible

3. Create messages effectively:
   - Brainstorm messages that fit the goal and audiences
   - Identify channels and sources
   - Plan appropriate delivery
   - Plan for desired campaign exposure

4. Pretest and revise messages:
   - Pretest messages and materials with intended audiences
   - Revise messages and materials based on findings

5. Implement the campaign:
   - Maintain campaign fidelity and stakeholder engagement
   - Evaluate all campaign aspects and communicate findings to stakeholders

The NCI Pink Book

cdc.gov/healthcommworks
Media Campaigns: What Can Health Comm Do?

- Campaign Goals:
  - Build public awareness of health damage from smoking
  - Encourage smokers to quit
- Target Audiences:
  - Smokers 18-54 and their loved ones
- Key Message:
  - Smoking causes immediate damage to your body (loss frame)
- Findings to Date:
  - Through 2012, 1.6 million smokers motivated to make a quit attempt.
  - >100,000 U.S. smokers remain quit
  - 6 million nonsmokers talked with friends and family about the dangers of smoking.

Deeper Dive #2

HEALTH LITERACY AND COMMUNICATION
What is Health Literacy?

- According to the US Affordable Care Act (ACA):
  - “The degree to which an individual has the capacity to obtain, communicate, process, and understand basic health information and services to make appropriate health decisions”

- Healthy People 2020 and the National Assessment of Adult Literacy (NAAL) use similar definitions of health literacy

**Health Literacy: What Do We Know?**

<table>
<thead>
<tr>
<th>Health Lit. level</th>

http://health.gov/communication/literacy/issuebrief
Health Literacy: What Do We Know?

- Lower knowledge and comprehension
- Negative outcomes
  - Taking medications inappropriately
  - Misinterpreting labels and health messages
  - Seniors’ reduced health status and quality of life
  - Increased mortality
- Health services utilization
  - Increased hospitalization
  - Increased emergency care visit
  - Reduced flu immunization
  - $30-73 billion in unnecessary costs

Baur, CDC, 2011; Berkman et al., 2011; Natl Academy on Aging Society, 1999

Moody College of Communication Center for Health Communication

Health Literacy: What Can Health Comm Do?

- Systematic review of health literacy interventions emphasizes the following:
  - Present essential information by itself
  - Present essential information first
  - Present numerical data (e.g., health plan quality) such that the higher number indicates more positive values
  - Use the same denominators to present baseline risk and treatment benefit
  - Add icon arrays to numerical presentations of risk/benefit
  - Add video to verbal narratives

Berkman et al. (2011) Low Health Literacy and Health Outcomes: An Updated Systematic Review. Annals of Internal Medicine

Moody College of Communication Center for Health Communication

1. Develop and disseminate health and safety information that is accurate, accessible, and actionable
2. Promote changes in the health care system that improve health information, communication, informed decision making, and access to health services
3. Incorporate accurate, standards-based, and developmentally appropriate health and science information and curricula in childcare and education through the university level
4. Support and expand local efforts to provide adult education, English language instruction, and culturally and linguistically appropriate health information services in the community
5. Build partnerships, develop guidance, and change policies
6. Increase basic research and the development, implementation, and evaluation of practices and interventions to improve health literacy
7. Increase the dissemination and use of evidence-based health literacy practices and interventions

Deeper Dive #3

MOBILE HEALTH COMMUNICATION
mHealth Communication: What Do We Know?

- Almost 10 trillion SMS messages sent in 2012
  - 80% of all US cell phone owners text
  - 92% of US smart phone owners text
  - US SMS users average 35 texts per day
  - Texting apps are growing (Kik, WhatsApp, etc)
  - 99% of received SMS are opened and 90% read within 3 minutes of being received

http://www.factbrowser.com/tags/sms

Moody College of Communication
Center for Health Communication
mHealth Communication: What Do We Know?

- Reviewed 15 systematic reviews and meta-analyses
  - Explored 89 individual studies using SMS for public health
  - SMS-based interventions were effective for diabetes self-management, weight loss and physical activity, smoking cessation, medication adherence for antiretroviral therapy
  - Limited consistent evidence across the studies and reviews to inform recommended intervention characteristics.
  - Additional research needed to establish longer-term intervention effects, identify recommended intervention characteristics, and explore issues of cost-effectiveness.

mHealth Communication: What Do We Know?

- Mobile web is a great way to reach underserved communities
- Few health sites have a mobile optimized websites
- Use “responsive design” and or create a mobile layer of critical content, plus S.E.O.
mHealth Communication: What Do We Know?

Very few apps are evaluated and very few app studies have been published in the literature

Moody College of Communication Center for Health Communication

Why Invest in Health Communication?

• Health communication improves the effectiveness of every major public health practice area
• Health communication is more than a service or skill
  – Science + Theory + Strategy + Creativity
• Health Policies + Access to Care and Services + Communication = Big Measurable Outcomes
  – Rules or access without communication has small effects
• Health Communication = Return on Investment (ROI)

Health Communication is (part of) the Cure!
MERCI BEAUCOUP
